

[Interim Final Rule](#)

[HEERF litigation updates can be found here](#)

1. The first part of the text discusses the importance of understanding the underlying structure of the data. It emphasizes that simply looking at the surface-level information is not enough; one must delve deeper to uncover the patterns and relationships that govern the data. This is particularly true in the context of machine learning, where the model's performance is heavily dependent on its ability to learn from the underlying structure of the training data.

2. The second part of the text discusses the importance of data preprocessing. It highlights that raw data is often noisy and contains missing values, which can significantly impact the performance of machine learning models. Therefore, it is crucial to preprocess the data to clean it up and ensure that it is in a format that is suitable for analysis.
